

Summary

Computer Science graduate with hands-on experience in software development, production troubleshooting, SQL analysis, and cloud-based systems. Experienced in building backend applications with Python and FastAPI, investigating complex technical issues through log analysis and network diagnostics, and collaborating with cross-functional teams to deliver reliable solutions. Passionate about software engineering, system monitoring, and cybersecurity technologies.

Technical Skills

Frontend: React, React Native, Angular, HTML, CSS

Backend: FastAPI, Node.js, Laravel, REST APIs, WebSockets

Databases: PostgreSQL, SQL, MongoDB, Firebase, SQLite

Networking: TCP/IP, DNS, HTTP/HTTPS, FTP, SSH, Network Troubleshooting

Cloud & Tools: AWS (EC2, RDS, S3), Git, CI/CD, SQLAlchemy, Expo, Generative AI

Experience

Technical Support Specialist | Comax Smart ERP | 2025 – Present

- Troubleshoot and resolve production issues in a large-scale ERP platform using SQL queries, log analysis, and network diagnostics.
- Investigate application failures, database inconsistencies, and system performance issues to identify root causes and implement effective solutions.
- Analyze application logs, database records, and system behavior to diagnose complex technical incidents.
- Collaborate with developers, QA engineers, and implementation teams to reproduce, investigate, and resolve software defects.
- Validate bug fixes and system changes through functional testing before deployment to production environments.
- Monitor business-critical processes and ensure system availability while maintaining high service standards.
- Create technical documentation, troubleshooting guides, and knowledge base articles to improve issue resolution efficiency.

Python Programming Tutor | Tel Hai University | Jul 2022 – Jul 2023

Delivered weekly tutoring sessions covering algorithms, data structures, problem solving, and Python debugging for Computer Science students.

Projects

Capstone Project Lead – Tribe Platform

- Designed backend architecture using FastAPI, SQLAlchemy and PostgreSQL.
- Implemented CRUD services, validation logic and relational data models.
- Built WebSocket-based real-time activity updates and participation tracking.
- Integrated Generative AI for automatic event image generation.
- Deployed cloud infrastructure using AWS and implemented automated integration testing with pytest.

Server Monitor System

- Developed a server monitoring platform for tracking service availability and system health.
- Built RESTful APIs using FastAPI and PostgreSQL for monitoring data management.
- Implemented concurrent HTTP, FTP and SSH health checks using ThreadPoolExecutor.
- Designed monitoring history and incident-tracking data models for proactive issue detection.

Education

B.Sc. Computer Science – Tel Hai University (Mar 2022 – Aug 2025)

Specialization: Artificial Intelligence, Machine Learning, Large Language Models (LLMs), Generative AI.
